STRONG ARGUMENTS

- Perfect cutting quality
- High capacity
- No disposal of cut-off material
- Minimal wear and maintenance
- Many mounting options

The Rotary Mulcher RM 232 provides enormous capacity and perfect performance. In one operation, branches are cut and instantly mulched.

Rotary Mulcher RM 232 has 4 rotors with 6 blades on each rotor. The free-hanging blades in the bottom cut the branches while the blades in the top pulverize them. In the case of an overload, the blades will rotate backward. Branches up to 4 cm are cut and crushed. The small twigs slowly sprinkle from the bottom of the machine to the ground and the decomposing process begins. RM 232 has a working width of 2.3 m and is specially designed for windbreak and roadside maintenance in cutting intervals of up to three years. The working speed is up to 4 km/h depending of the density of the hedge. Very large capacity and no clean up required.

ROTARY MULCHER RM	232
Working width (m)	2.3
Weight (kg)	310
Max. branch thickness (cm)	Ø4
Oil flow (l/min.)	50
